

Pre-engineered window systems are the way of the future because they offer the lowest pricing and shortest lead times. Moduline's Preference Program allows you to get fast, accurate quotes and short lead times. Once your signed quotation becomes an order, it is processed directly to manufacturing the same day. A delivery schedule is immediately established so that you can efficiently plan installation at the project site.

(1) shipped in stock lengths

## OFFERED SERIES

### ZERO SIGHTLINE

30P Zero Sightline operable vents are specifically designed for curtainwall systems, offering minimal exterior sightlines at ventilator areas. The 30P is very popular as a stand alone unit, sized to fit any "punched" opening. Structural glazing and an "invisible" sash frame design, means that virtually all you see is glass.

29P Zero Sightline operable vents are specifically designed for 4 1/2" depth, center-glazed storefront systems, offering minimal exterior sightlines at ventilator areas. The versatile 29P glazes into pocket of flat surface systems, and is the best choice for aesthetics and performance at an affordable price.

### SLIDING WINDOWS

The 51P series PrimeTek™ slider features reversible slide direction sash panels and adjustable nylon rollers with SS ball-bearings for smooth, quiet operation and easy replacement. Economical "wrap-around" glazing allows for clean and simple glass replacement with no special tools. Factory glazing standard.

### PROJECTED/ CASEMENT FIXED WINDOWS

Moduline was built on the Signature line of Architectural grade windows. Available in virtually any combination, the 12PL series, 2 1/2" depth, overlap sash-to-frame construction, .094" minimum wall thickness and time tested thermal barriers provide maximum comfort and appearance at an economical price.

The .125" wall thickness Signature 12PF series, with flush sash-to-frame construction, features a poured thermal barrier system and 2 1/4" frame depth.

The 40P series 2" depth PrimeTek™ window system from Moduline is designed for long-lasting durability and performance at a competitive price. Available in a multitude of fixed, operating vent and stacked configurations.
